

DataComp 7 - System Requirements

Windows 10 Notification

Some DataComp customers have required re-installation of our products after upgrading to Windows 10 from an older operating system where the products were previously installed. We have noticed increased stability and dependability of Windows 10, particularly following the November, 2015 update from Microsoft.

If you decide to implement Windows 10, we recommend you backup DataComp to an external resource (such as a thumb drive or external hard drive) prior to updating your operating system. This will ensure that your data is not lost if your system encounters issues during the upgrade. We have not encountered any instances of database loss or corruption, however due to the substantial changes in the operating system it would be prudent to complete a current backup. For detailed instructions on how to backup DataComp, please [click here](#).

Please reach out to our Technical Support department if you have need assistance planning your upgrade, have any issues or would like further information regarding DataComp.

- **Workstations:**
